Overview of Hydrogen Projects in the Netherlands

Peter de Laat for TKI Nieuw Gas

May 2021

Introduction

Globally hydrogen projects are developing at a great speed. New projects are announced on a weekly basis. Dutch industry, research institutions, consultants, NGOs and governments actively take part in these developments and are jointly working on a large range of projects, aimed at realizing the potential role that hydrogen can play in the energy transition to carbon neutrality in 2050. These projects not only focus on The Netherlands, but also seek to connect to our neighboring countries, stakeholders in the North Sea region and to the global arena.

In this slide deck we present an overview of Dutch research, pilot and demonstration projects on hydrogen which are ready to be shared in the public domain. We hope that this overview of projects inspires everyone to continue working on the realization of these projects and start new ones. Of course this overview is not complete, it is just a picture of what is happening at this moment. If your project is not yet listed in this overview, or if the information presented is not accurate, please let us know so we can keep this overview up-to-date. Please contact us at office@tki-gas.nl.

Enjoy reading!

Jörg Gigler, managing director TKI New Gas | Topsector Energy

Explanation of the information box

- Category What is the main subject of the project in the hydrogen chain?
- Capacity What is the size of the project in MW, tons H₂/hour or trucks build?
- Process phase In which phase is the project:

concept	(idea development)
feasibility study	(first design)
FEED-study	(business case)
FID	(investment decision)
execution	(implementation, building)
commissioning	(test run)
- Project costs The amount of subsidy or investment involved.
- Contact Here, more information on the project or initiative is given.

Production III

H2ARVESTER

Harvesting Extra Hydrogen on Agricultural Land in Use

The mobile H2ARVESTER can be used as an 'extra crop' in the rotational cultivation of arable farmers. The yield of the solar panels can be processed into hydrogen (H₂) and stored, to balance the production and use of the generated energy.

Category:	production of hydrogen
Capacity:	variable
Process phase:	concept
Project period:	2017 - 2021
Project costs:	unknown
Contact:	h2arvester@rak.nl

Partners: LTO noord, Rijkswaterstaat, TNO, Wageningen UR

Bio-TechH₂

Production of Bio-Hydrogen

Creating the basis for an implementation of biobutanol production from biogenic waste streams and wastewater with smart bacteria in fermentation tanks. Upscaling to large-scale technology to realize the development step of a market-ready establishment.

Category:	production of biobutanol
Capacity:	variable
Process phase:	POCD study
Project period:	2018 - 2022
Project costs:	300+ internat industry
Contact:	www.biohydrogen.nl/forrest

Partners: Universiteit van Twente, Eindhoven University of Technology, BioEnergy Cluster, PlanE, H2or

Djewels-1

Realisation of a 20 MW Electrolyser in Delfzijl

Operated by Nouryon and Gasunie, it will provide 3,000 tons of green hydrogen per year, reducing CO₂ emissions by 27,000 tons per year. The produced hydrogen will be used for green methanol production for transport fuel at DSM/N. This plant also must validate the technical integrity and operating processes, capacity and safety of a large-scale water electrolyser plant.

Category:	production of hydrogen
Capacity:	20 MW
Process phase:	POCD study
Project period:	2024 -
Project costs:	100 MW study
Contact:	www.gasunie.nl/weg1

Partners: Nouryon, Gasunie, DSM, MCFPV, H2or, DE NOVA

H2-Fifty

Building a 250 MW Electrolysis Plant in Port of Rotterdam

The new factory will be able to produce 40,000 tons of green hydrogen annually. Because the hydrogen is produced from water with sustainable electricity, CO₂ emissions are almost zero. The plant will use the green hydrogen to produce methanol and mobility products. The H2-Fifty project will be in the so-called Cavenham Park, a special site that the Port Authority is building on the Maasvlakte for electrolysis from natural gas.

Category:	production of H ₂
Capacity:	250 MW
Process phase:	POCD study
Project period:	2018 - 2022 (POCD)
Project costs:	225 - 300 M
Contact:	h2fifty@portofrotterdam.nl

Partners: Port of Rotterdam, Nouryon

Porthos

CCUS Infrastructure for Blue Hydrogen in Port of Rotterdam

Tensile of green hydrogen production at the Delta site of Air Products in the Port of Rotterdam into blue H₂ CO₂ into the North Sea bottom. The CO₂ will be transported through an offshore pipeline to a platform in the North Sea, representing 20 km off the coast. From this platform, the CO₂ will be injected in an empty gas field. The empty gas fields are situated in a water reservoir of porous sandstone, more than 3 km beneath the North Sea. It is expected that the system will be operational by 2025.

Category:	production of blue H ₂
Capacity:	2.8 million tce CO ₂ per year
Process phase:	POCD study, POCD 2022
Project period:	2023 - 2029
Project costs:	2.8 B USD + 1.20 B USD study
Contact:	www.porthos.nl

Partners: Air Products, ExxonMobil, Shell, Enbridge, H2or, Liquide Gasunie

Eernshydrogen

Building a 50 MW Hydrogen Plant for Westereems Wind Farm

The Eernshydrogen project demonstrates at scale (50MW) that electrolyzers can flexibly follow intermittent power production from a directly connected wind farm. The electrolyser supports development of a large hydrogen infrastructure and targets CO₂ reduction in heat to stable industrial sectors. Depending on market conditions and regulations, the electrolyser capacity will be scaled up further.

Category:	production of green H ₂
Capacity:	50 MW
Process phase:	conceptual design
Project period:	POCD in 2024
Contact:	www.eernshydrogen.nl/en

Partners: WATTENFALL, Enbridge

Hy4Am

Building a 10 MW Electrolyser at Hemweg Location

The goal is to locally approximately 200 kg/hour green hydrogen in mobility and industry in the Amsterdam region from 2024. The technical feasibility study has been successfully completed and the focus is currently on developing market demand and refining the business case. This plan is the first part of a local free hub (production, storage and distribution) for producing green electricity, heating and fuels for Amsterdam's Westpoort Region.

Category:	production of H ₂
Capacity:	10 MW, 200 kg/h
Process phase:	feasibility study finished
Project period:	2018 - 2024, POCD in 2022
Contact:	www.vdfcc.nl/en/10

Partners: WATTENFALL, Port of Amsterdam

H-vision

A Unique Approach for Industry to Achieve its Climate Targets with Low-CO₂ Hydrogen

Mixing together the full hydrogen value chain, to deliver 2.7 Mton of CO₂ emissions reductions for the Rotterdam industry by 2030. With two world-scale hydrogen plants, capturing over 90% of the CO₂ emissions. The unique process uses refinery fuel gas as its primary feedstock. The low-carbon hydrogen will have a purity of over 99%.

Category:	production of low-CO ₂ Hydrogen
Capacity:	2 plants of 150 MW concept
Process phase:	2024 - 2032
Project period:	2024 - 2032
Project costs:	1-2 B investment
Contact:	kapsen@h2vision.nl

Partners: Shell, Air Products, H2or, OXYS

GreenH2UB

Creating a Green Hydrogen Ecosystem in North-Brabant

GreenH2UB is a 5-10 MW green hydrogen plant based on POCD production. Application and deployment in industry, mobility and built environment. The realization of the first GreenH2UB is led by the KSP in the Midden-Region Cluster. The GreenH2UB will be connected directly to wind farms in Park and order farms. Provided the Contract Design and obtained a positive Feasibility Study.

Category:	production of green H ₂
Capacity:	5-10 MW (2024-2025)
Process phase:	POCD study
Project period:	POCD 2022, CO2 2023
Project costs:	400-1200 M USD
Contact:	www.greenh2ub.nl

Partners: FORCE, BOM, Borealis, H2or, HyEnergy

HEAVENN

H₂ Energy Applications in Valley Environments for Northern NL

The project's support focus on sectoral synergy: the large-scale production of green hydrogen as a raw material for industry, the storage, transport and distribution of hydrogen and its application for energy, except for both industry and the built environment and mobility.

Category:	production H ₂ in Energy Valley
Capacity:	30 MW capacity
Process phase:	POCD study
Project period:	2020 - 2025
Project costs:	90 M
Contact:	New Energy Coalition

Partners: Shell, Air Products, H2or, OXYS, TNO, Wageningen UR

Hydrogen Delta

Shift of the Largest Hydrogen Producer (500kta) and Consumer in the Benelux to a Sustainable Hydrogen Cluster.

The Hydrogen Delta Program aims to make industry more sustainable by steering out grey hydrogen into blue hydrogen (CO₂) and green hydrogen. In addition, efforts are made to use yellow hydrogen (renewable) and, when appropriate, orange hydrogen (renewable). This by producing green hydrogen on a large scale, ensuring it locally and ensuring well-expected. The next step is to build and the kick-start of green hydrogen plants.

Category:	production, distribution
Capacity:	1-1.5 GW projects
Process phase:	POCD study
Project period:	2020 - 2028
Project costs:	1-1.5 B
Contact:	www.hydrogendelta.eu

Partners: Shell, Air Products, H2or, OXYS, TNO, Wageningen UR

GZI NEXT

A Second Life for the GZI Site in Emmen, with Hydrogen

Together they look at the possibilities of using the existing infrastructure for the generation of green gas through fermentation or gasification and for the generation of hydrogen. In 2025, previous of Drenthe order 10 hydrogen buses and a 10 MW electrolyser is planned to lead them.

Category:	production, distribution
Capacity:	10 MW
Process phase:	POCD study
Project period:	2025 -
Project costs:	1.5 M provincial subsidy
Contact:	aweg@emmen.nl

Partners: GASPHU, H2or, OXYS

Bio Energy Netherlands

Wood Gasification with Production of Hydrogen and CO₂

The wood gasification plant in Amstelveen will extract hydrogen and CO₂ from the syngas, which can be used for transport fuels and in the chemical industry, amongst others. Developing and testing a gas upgrading system linked to a gasifier for production of green hydrogen.

Category:	production
Capacity:	-
Process phase:	POCD study
Project period:	2018 - 2023
Project costs:	TSC 500 k
Contact:	info@bioenergy.nl

Partners: Bio Energy Netherlands, HYGEAR

Hydrogen Mill

Building a Windmill that Produces Hydrogen

Two 4.5 MW ENERCON windmills will be built in 2021 and a 2.1 MW electrolyser will be integrated in 2022. The goal of this project is to create synergy between the wind turbine, electrolyser and pipeline & storage. The demonstrator hybrid turbine will be built on the ECH test location in the Wieringermeer.

Category	production, storage, distribution
Capacity	2 MW
Process phase	execution
Project period	2021 - 2022
Project code	HydroMill
Contact	info@h2-gro.nl

Partners: ENERCON, New Energy Gateway, HYGRO, TNO

PosHYdon

Hydrogen Production from North Sea Water on an Offshore Platform

A 1 MW electrolyser in a sea container on the platform, the O2 is very suitable for this. It is a fully stock-listed offshore platform. This stock-listed platform with green electricity saves 16.3 kJ of CO₂ per tonne.

Category	production of H ₂
Capacity	1 MW
Process phase	POCD study
Project period	2019 - 2021
Project code	Uthmaniyah
Contact	patrick.schouten@tandemenergy.com

Partners: Tandem Energy, H2Gate, TNO

H2ermes

Building a 100 MW Hydrogen Plant in Amsterdam for TaTa Steel

Deployment of hydrogen delivered by a 100 MW electrolysis plant to produce basic and / or basic chemicals with the carbon monoxide (CO) and carbon dioxide (CO₂) in the residual gases from the steel production at TaTa Steel.

Category	production
Capacity	100 MW
Process phase	POCD study
Project period	2018 -
Project code	100 M
Contact	Henk.van.Hoek@tatasteel.nl

Partners: TATA STEEL, Nouryon

Molten Metal Methane Pyrolysis

Producing 'Turquoise' Hydrogen from Natural Gas

Methane pyrolysis produces hydrogen from natural gas with carbon (and red CO₂) as a valuable by-product. Affordable and commercially applicable within a few years. The applications are diverse. Think of additive for steel, filler in car tires, graphite, dye and soil conditioner.

Category	production, knowledge
Capacity	available
Process phase	POCD
Project period	2019 - 2020
Project code	Uthmaniyah
Contact	william.frens@tno.nl

Partners: TNO, VOLTA CHEM

GH2

Producing Hydrogen by Gasification of Biomass in 'het Groene Hart'

The pilot plant of initially 1 kg H₂/day, the size of four parking spaces, is located at Vermeulen Groep, a civil engineering company. Green gas and wood waste is used for heating. The pilot will serve the design of a 300 kg H₂/day production plant using 10 ton/day biomass. On an annual basis that is 3000 tonnes. The gasifier of the production plant will be 2 MW thermal and we produce 1 ton/day of biochar per day which is equal to 3 tonnes of CO₂ equivalent stored. The production of 300 kg hydrogen requires a 1.2 MW steam boiler which requires a 202.8 MW installed capacity of 180 tonnes oil. The hydrogen obtained is partly used by Vermeulen Groep, who wants to make their business more sustainable.

Category	production of H ₂
Capacity	300 kg/day (1.2 MW)
Process phase	POCD study
Project period	2016 - 2022
Contact	info@gh2.nl

Partners: NETT Energy, VERMEULEN GROEP

NorthH2

The Production of Green Hydrogen from a GW Windfarm in the North Sea

The objective is to generate 0.6 to 0.8 GWh of green hydrogen per year, and possibly 1.5 GWh in 2040. Green hydrogen production of 80,000 tons, prevents around 7 megatonnes of CO₂ emissions per year. The final concept will be selected in mid-2022 and then further developed towards an investment decision in 2024.

Category	production of H ₂
Capacity	0.6 - 0.8 MWh/y
Process phase	POCD study
Project period	2020 - 2040
Project code	Uthmaniyah
Contact	info@northh2.nl

Partners: gas2h2, E.ON Energy Research Center, H2Gate, Equinor, TNO, Shell, Pragma

HyNetherlands

Building a 100 MW Electrolyser in the Eemshaven

The factory will also have an important function for the balance in the electricity system. If the wind farms supply more electricity than is currently needed, it can be converted into hydrogen and stored. If necessary, the hydrogen can be converted back into electricity. ENH is now engaged in the preparatory activities for taking the final investment decision for the 100MW electrolyser at the end of 2021. Commissioning is scheduled for 2024.

Category	production of hydrogen
Capacity	150 MW for 1 GW
Process phase	POCD study
Project period	2021 - 2022
Project code	50 - 100 M
Contact	www.enh.nl/enh-016/projection/hy/netherlands

Partners: gas2h2, ENH, GETEC, M&E Energy

H2-Gateway

Empty Gas Fields Play a Role for Blue Hydrogen Production

The hydrogen gas can be produced with green energy from the large offshore wind farms that will be built in the coming decades. But even now hydrogen can be produced from natural gas. The released CO₂ can be captured and stored in the empty gas fields below the North Sea.

Category	production of H ₂
Capacity	0.2 Mtpa
Process phase	POCD study
Project period	2020 - 2025
Project code	600 M auto
Contact	Thijs.Paerink@rdg.nl

Energiepark Eemshaven-West

Combining four Technologies to Produce Renewable Hydrogen

Vattenfall aims to produce 100% renewable hydrogen in the area of Eemshaven-West, in Northern Netherlands, by connecting wind and solar electricity production directly to an electrolyser and a battery, in order to decarbonize the mobility and industry sector. The renewable hydrogen will initially be produced with a 10 MW electrolyser (2024), after which a ramp-up will take place towards 100 MW by 2027.

Category:	production of H ₂
Capacity:	10 MW(2024) -100 MW(2027)
Process phase:	FEED-study (permitting phase)
Project period:	2020 – 2023, FID in 2023
Contact:	www.vattenfall.com/nl

VATTENFALL 

ELYgator

Building a 200MW Electrolyser in Terneuzen

Energy Air Liquide intends to develop the ELYgator, a large-scale 200MW water electrolyser project that will be entirely sourced from renewable power sources and will enable avoidance of 4M tons of CO₂ over the first 10 years of the plant's operation. The unit is planned to become operational in 2024 and produce over 18 ktons of renewable hydrogen per year which will be injected into Air Liquide's European cross-border hydrogen network and dedicated to both mobility applications as well as industrial applications.

Category:	production of H ₂
Capacity:	200 MW
Process phase:	FEED-study
Project period:	2020 – 2024
Project costs:	€ 270 - 290M
Contact:	michael.depauw@airliquide.com

H2 Conversion Park

Building First 2 GW Conversion Park for Large Scale Hydrogen Production on the Maasvlakte in Rotterdam

Several large-scale hydrogen factories will produce hydrogen on this central location and share at least electricity and hydrogen infrastructure. From this central location hydrogen will be transported via the open-access hydrogen backbone towards companies in the Port of Rotterdam. The first electrolyzers announced in the conversion park are the 150-250MW of Shell (2023) and 250MW of H2-Fifty (BP and Nouryon; 2025).

Category:	production of H ₂
Capacity:	1-2 GW
Process phase:	concept
Project period:	2020 – 2050
Project costs:	unknown
Contact:	rfm.weterings@portofrotterdam.com

Partners:

H2Gate

Import of Megatons of Green Hydrogen in Amsterdam

H2Gate focuses on the development of large-scale hydrogen imports to the Amsterdam port region (1 million ton per year). The project focuses on several hydrogen carriers that match the infrastructure in the port. The expected result of the first step is a blueprint that reveals the potential and challenges for large-scale green hydrogen import, and a roadmap that identifies concrete next steps for the development of a demonstration project. The first phase of the project will run to July 2021. The aim for the realization of the import terminal is around 2030.

Category:	production of H ₂ by import, storage
Capacity:	1 Mton/ year
Process phase:	Feasibility-study
Project period:	2021 – 2030
Project costs:	unknown
Contact:	Eduard.de.Visser@portofamsterdam.com

Partners:

H₂ero

Hydrogen out of Energy of Renewable Origin for Zeeland

The project initially consists of a feasibility study into a 150 MW electrolyser on the site of Zeeland Refinery in Vlissingen. This location is particularly suitable given its location in an already highly hydrogen-intensive region with many opportunities for setting up and scaling up a 'low-carbon' hydrogen value chain. An annual production of 23 kT of green hydrogen can be expected with the installation, which is equivalent to an avoided CO₂-emission of approximately 200 kTa compared to H₂ production through the conventional fossil route.

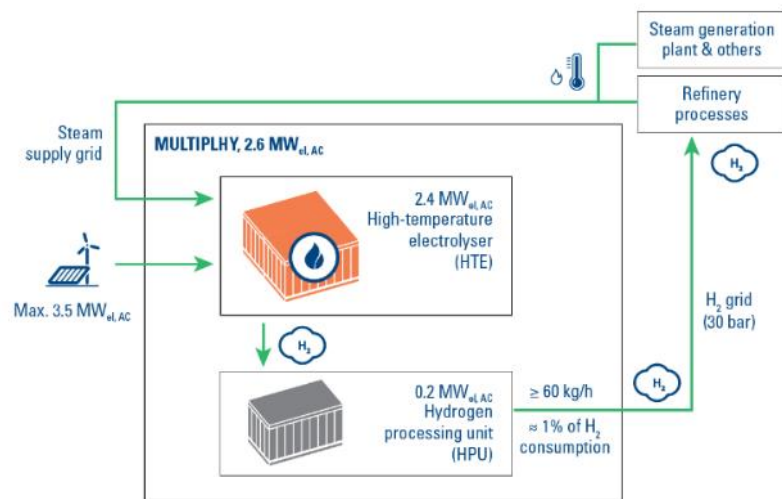

Category:	production of H ₂
Capacity:	150 MW
Process phase:	Feasibility-study
Project period:	2021 – 2026
Project costs:	unknown
Contact:	koen.van-leuven@zrefinery.nl

Partners:

Pilotplant of First High-Temperature Electrolyser (HTE) System

MULTIPLHY thus aims to install, integrate and operate the world's first high-temperature electrolyser system in multi-megawatt-scale, at a biofuels refinery in Rotterdam to produce hydrogen for the refinery's processes. MULTIPLHY's electrical efficiency (85 %el, LHV) will be at least 20 % higher than efficiencies of low temperature electrolysers, enabling the cutting of operational costs and the reduction of the connected load at the refinery and hence the impact on the local power grid.

Category:	production of H ₂
Capacity:	2.6 MW / 60 kg/h
Process phase:	execution, operational Q2 2022
Project period:	2020 – 2024
Project costs:	9.75M€

FUREC

Hydrogen Production Plant by 'waste-to-chemicals' on Chemelot

The project plans to transform residual waste into raw material pellets, which are then converted into hydrogen at industrial park Chemelot. FUREC (Fuse Reuse Recycle) uses existing waste streams, partly of biogenic origin, so that they do not have to be landfilled or incinerated. FUREC saves the equivalent of 140.000 households of natural gas use. In addition to local sales at Chemelot, the hydrogen can eventually be transported to industry in Rotterdam and the German Ruhr area. The CO₂ released during the production of hydrogen can be either captured and stored or used as a raw material in the future.

Category:	production of H ₂
Capacity:	200 Mio m ³ a.e.
Process phase:	Feasibility-study
Project period:	2021 – 2025

Haddock

Building a 100 MW Electrolysis Plant on Yara-site in Sluiskil

The aim of the project is to replace fossil hydrogen, mainly produced from natural gas, with renewable hydrogen to produce 75,000 tons of green ammonia a year. That is approximately 10 percent of the capacity of the largest of the ammonia plants in Sluiskil. The green ammonia is intended to be used in the production of carbon neutral fertilizer products, decarbonizing the food value chain, and also has potential as a future climate neutral shipping fuel. The installation is powered by dedicated renewable energy supply from Ørsted's offshore wind farms.

Category:	production of H ₂
Capacity:	100 MW

Uniper

Building a 100 MW Electrolysis Plant on the Maasvlakte

Energy company Uniper and the Port of Rotterdam Authority are investigating the possibilities for large-scale production of green hydrogen on the Maasvlakte. The ambition is to realize a hydrogen plant with a capacity of 100 MW on the Uniper site by 2025 and eventually expand that capacity to 500 MW. The Maasvlakte is an excellent location to produce green hydrogen. Renewable electricity from offshore wind farms will soon be landed here and various important facilities are already present on the Uniper site.

Category:	production of H ₂
Capacity:	100 MW
Process phase:	Feasibility-study

GROHW

Designing a Local Scalable Hydrogen System Together

We want to have impact as a green hydrogen accelerator. That means we look at the most viable scenario for local green hydrogen, oxygen and heat production and utilization and make this scenario scalable by developing a blueprint for our approach and design. A PEM electrolyser coupled to a gas-fired adsorption heat pump and Energy Flex Platform is being prepared for a 50-kW demonstration of the hydrogen system. Through this demonstration, we aim for first steps in CO₂ emission reduction in the built environment and industry.

Producing Hydrogen by Gasification of Biomass in 'het Groene Hart'

The pilot plant of initially 1 kg H₂/day, the size of four parking spaces, is placed at Vermeulen Groep, a civil engineering company. Verge grass and wood waste is used for testing. The pilot will serve the design of a 500 kg H₂/day production plant using 10 ton/day biomass. On an annual basis that is <100 trucks. The gasifier of the production plant will be 2 MW thermal and co-produce 1 ton/day of biochar (so no ash), which is equal to 3 ton/day of CO₂ equivalents stored. The production of 500 kg hydrogen/day equals a 1.2 MW electrolyser which requires a 2x2.5 MW land-based windmills of 100 meters tall. The hydrogen obtained is partly used by Vermeulen Groep, who wants to make their business more sustainable.

Category:	production of H ₂
Capacity:	500 kg/day (=1.2MW)
Process phase:	pilotplant, demonstration
Project period:	2019 - 2022

Overview

Backbone NL

Building a National Hydrogen Supply Chain in NL

Gasunie is building a national network that will connect future carbon-free hydrogen supply and demand. Five industrial clusters will be linked to each other, to foreign countries and to hydrogen storage facilities. This will be done mainly with existing infrastructure and partly with new infrastructure that has yet to be built. Current plans call for the first parts of the national backbone to be available in 2026. These are located in the north of the Netherlands, and in the Rotterdam area.

Hydrogen Oil

Liquid Organic Hydrogen Carriers as a Maritime Fuel

The fuel is produced through a process where Hydrogen and a liquid that we call Storage Oil are combined by applying heat and pressure in a patented process. Being a liquid, the Hydrogen Oil can easily be transported and refueled into a maritime vessel. Onboard of the vessel, the Hydrogen is released from the Hydrogen Oil by applying heat and pressure in the reverse process. When we release hydrogen, the liquid becomes Storage Oil which can be charged again for its next usage. This is tested in this pilot in IJzendoorn.

Hydrogen Oil

Liquid Organic Hydrogen Carriers as a Maritime Fuel

The fuel is produced through a process where Hydrogen and a liquid that we call Storage Oil are combined by applying heat and pressure in a patented process. Being a liquid, the Hydrogen Oil can easily be transported and refueled into a maritime vessel. Onboard of the vessel, the Hydrogen is released from the Hydrogen Oil by applying heat and pressure in the reverse process. When we release hydrogen, the liquid becomes Storage Oil which can be charged again for its next usage. This is tested in this pilot in IJzendoorn.

Hydrogen Sensor Technology

Developing Better Sensors for Natural Gas / Hydrogen Mixtures

The project aims to develop a technology that allows the cost-effective and sufficiently accurate measurement of the composition of natural gas / hydrogen mixtures, wherein high concentrations of hydrogen are mixed (typically up to 90%). The HyDeploy (UK) project is a follow-up project, in which the developed sensor technology is put into a field test. In this project, up to 20% hydrogen is mixed in the natural gas. Duration until end 2022.

Distribution

Overview

H2Milk Run

Mobile Hydrogen Refuelling Station

Daily delivery of hydrogen via a small truck with a full functional HRS at multiple sites a day (a "Milk Run"). This initiative enables to start with fuel cell forklift trucks without the need to invest in infrastructure, in order to accelerate the use of hydrogen in logistics in a region. In spring 2022 the new GINAF truck will start to distribute hydrogen in the region of Ede.

Category:	distribution
Capacity:	1 truck

Deployment: Mobility

Overview

This slide provides an overview of the presentation content, organized into a 3x4 grid of 12 smaller slide thumbnails. The thumbnails cover various topics related to hydrogen mobility, including project descriptions, technical details, and deployment strategies. A small circular logo with the letter 'm' is located in the bottom right corner of the slide frame.

Deployment: Mobility I

This slide is titled 'Deployment: Mobility I' and displays a grid of 20 smaller slide thumbnails. The thumbnails focus on deployment-related content, such as infrastructure requirements, pilot projects, and market analysis. A small circular logo with the letter 'm' is located in the bottom right corner of the slide frame.

Deployment: Mobility II

This slide is titled 'Deployment: Mobility II' and displays a grid of 16 smaller slide thumbnails. The thumbnails continue the deployment-related content, covering topics like policy support, financing, and operational challenges. A small circular logo with the letter 'm' is located in the bottom right corner of the slide frame.

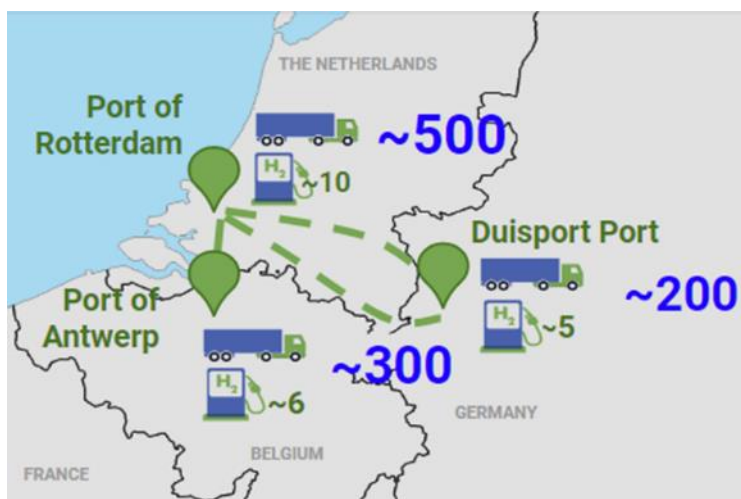

Deployment: Mobility I

<h3>Overview</h3>	<h3>Deployment: Mobility II</h3>	<h3>HyTrucks</h3> <p>A concerted market approach for H2 port acceleration Port of Rotterdam - Port of Antwerp - Port of Duisburg</p> <p>HyTrucks aims to initiate the zero-emission heavy-duty transport vehicle value chain in the Port of Rotterdam with a focus on the Port of Antwerp and the Port of Duisburg. The HyTrucks initiative is based on 1,000 hydrogen-fueled trucks on the road as well as the corresponding low-carbon hydrogen production and refueling infrastructure by 2025.</p> <table border="1"> <tr><td>Category</td><td>Deployment in mobility</td></tr> <tr><td>Capacity</td><td>1,000 trucks, 20-25 refueling stations</td></tr> <tr><td>Process phase</td><td>FEED-study</td></tr> <tr><td>Project period</td><td>2020 - 2025</td></tr> <tr><td>Project code</td><td>790</td></tr> <tr><td>Contact</td><td>info@hytrucks.eu</td></tr> </table> <p>Partners: </p>	Category	Deployment in mobility	Capacity	1,000 trucks, 20-25 refueling stations	Process phase	FEED-study	Project period	2020 - 2025	Project code	790	Contact	info@hytrucks.eu	<h3>Green Planet</h3> <p>Building a Hydrogen Filling Station and Regional Transport Hub</p> <p>Green Planet is also called the "Hub of the Future". This is why we want to offer hydrogen for passenger cars at Green Planet in Pesse. To this end, we are working within the innovative TSO2020 project with many partners - including Cleanmax and Hyzon - who, like us, believe in hydrogen. In addition to refueling with hydrogen, we are also working with partners on a hydrogen transport hub in the northern Netherlands, a place where green hydrogen is compressed in relation to our data hub for hydrogen fuel.</p> <table border="1"> <tr><td>Category</td><td>Deployment in mobility</td></tr> <tr><td>Capacity</td><td>3 filling stations, 100 vehicles</td></tr> <tr><td>Process phase</td><td>commissioning</td></tr> <tr><td>Project period</td><td>2020 - 2022</td></tr> <tr><td>Project code</td><td>0100000</td></tr> <tr><td>Contact</td><td>info@greenplanet.nl</td></tr> </table> <p>Partners: </p>	Category	Deployment in mobility	Capacity	3 filling stations, 100 vehicles	Process phase	commissioning	Project period	2020 - 2022	Project code	0100000	Contact	info@greenplanet.nl	<h3>Hydrogen fuel cell sweeper</h3> <p>Sweeping of Inner Cities Without Emissions</p> <p>The fuel cell sweepers hydrogen and oxygen to generate energy to drive and power the machine, after which only a small amount of water vapor comes out of the exhaust. With the new sweeper we immediately introduce a hydrogen refueling infrastructure (H2 fuel). This was on the part of an expensive refueling system because the H2 just is flexible and offers the possibility to quickly and simply refuel for the empty hydrogen refueling tanks for a full hydrogen refueling system, refueling and refueling on board.</p> <table border="1"> <tr><td>Category</td><td>Deployment in mobility</td></tr> <tr><td>Capacity</td><td>10000 sweeper</td></tr> <tr><td>Process phase</td><td>evaluation, demonstration</td></tr> <tr><td>Project period</td><td>2019 - 2021</td></tr> <tr><td>Project code</td><td>0010000</td></tr> <tr><td>Contact</td><td>www.cleannet.nl</td></tr> </table> <p>Partners: </p>	Category	Deployment in mobility	Capacity	10000 sweeper	Process phase	evaluation, demonstration	Project period	2019 - 2021	Project code	0010000	Contact	www.cleannet.nl

A concerted market approach for H2 growth acceleration Port of Rotterdam - Port of Antwerp - Port of Duisburg

HyTrucks aims to kickstart the zero-emission major heavy duty transportation vehicle value chain in the Port of Rotterdam with corridors to and in the Port of Antwerp and the Port of Duisburg. The HyTrucks ambition is have 1,000 hydrogen fuelled trucks on the road as well as the corresponding low carbon hydrogen production and refuelling infrastructure by 2025.

Category:	deployment in mobility
Capacity:	1,000 trucks, 20-25 refuelling stations
Process phase:	FEED-study
Project period:	2020 – 2025
Project costs:	TBD
Contact:	robert@gcnl.eu

Partners(NL):

Port of Rotterdam, Air Liquide, Air Products, VDL, Hyzon/Holthausen, Total Gas Mobility, Cummins/Hydrogenics, Vattenfall, Toyota Motor Europe, Vos Logistics, HN Post, Jongeneel Transport, Peter Appel, Simon Loos, Cornelissen Groep, Containerships, Waterstofnet

Green Planet

Building a Hydrogen Filling Station and Regional Transport Hub

Energy Hydrogen is also called the "fuel" of the future. That is why we want to offer hydrogen for passenger cars at Green Planet in Pesse. To this end, we are working within the innovative TSO2020 project with many partners - including Gasunie and TenneT - who, like us, believe in hydrogen. In addition to refueling with hydrogen, we are also working with partners on a hydrogen transport hub in the Northern Netherlands: a place where green hydrogen is compressed in trailers that can distribute the hydrogen further.

Category:	transport of H ₂ , distribution
Capacity:	1 filling station, hub
Process phase:	commissioning
Project period:	2020 – 2022
Project costs:	unknown
Contact:	https://greenplanet.nl/

Partners:

Hydrogen fuel cell sweeper

Sweeping of Inner Cities Without Emissions

The fuel cell uses hydrogen and oxygen to generate energy to drive and sweep the machine, after which only a small amount of water vapor comes out of the exhaust. With the new sweeper we immediately introduce a hydrogen exchange bottle system (H2 pod). This saves us the purchase of an expensive refueling system, because the H2 pod is flexible and offers the possibility to quickly and safely exchange the empty hydrogen exchange bottle for a full hydrogen exchange bottle, wherever and whenever we want.

Category:	deployment in mobility
Capacity:	500H2 sweeper
Process phase:	execution, demonstration
Project period:	2019 - 2021
Project costs:	DKTI-subsidy

CLEANMAT TRUCKS

Hyzon Motors Europe

Building Heavy Duty Hydrogen Trucks in Winschoten

Holthausen Clean Technology and the American Hyzon Motors will build heavy duty hydrogen trucks in Winschoten that run on green hydrogen. The factory will initially make 500 trucks per year. Production will eventually be increased to 2,000 trucks annually. This means that the number of direct and indirect jobs generated by the factory will grow from the first hundred to a thousand jobs in the next years.

Category:	deployment in mobility
Capacity:	2,000 trucks/year
Process phase:	execution
Project period:	2021 – 2025
Project costs:	unknown
Contact:	Carl@holthausen.nl

Partners:

WEVA

Building Hydrogen Electric Cargo Ship Antonie

The use of hydrogen in inland shipping is still in its infancy. By developing a new ship now that runs on green hydrogen, it will soon be possible to experiment further in practice with the production, storage and transport of hydrogen applications. In this way, hydrogen can develop as an important sustainable propulsion system for inland vessels in addition to, for example, battery-electrically powered ships. The ship will be 135 meters long, 3,700 tons and will transport salt from the Nouryon factory in Delfzijl to the Botlek in Rotterdam.

Category:	deployment in mobility
Capacity:	1 cargo ship
Process phase:	execution
Project period:	2021 – 2023
Project costs:	4 M Green Deal subsidy

Nouryon

ZEPS

Convert an Existing Passenger Ship into a Hypermodern, Hydrogen-powered Ship: From MPS Patria to ZEPS Patria

The ZEPS (Zero Emission Passenger Ship) pilot project should guide shipping policy at a national and European level. The existing diesel engines will be replaced. A combination of a PEM-H₂ fuel cell and a Li-Battery pack form the basis of the energy supply. For back-up energy, solar and wind energy will be used.

Category:	deployment in mobility
Capacity:	1 passenger ship
Process phase:	FEED-study
Project period:	2020 – 2022
Contact:	www.climateships.eu

GREEN SHIPPING WADDENZEE

World Heritage Site as an Inspiration for Sustainable Shipping with Hydrogen on the Wadden Sea

The Green Shipping Waddenzee program aims to accelerate innovations in the field of CO₂-neutral and fossil-free shipping for the Wadden fleet and to develop the associated port facilities and infrastructure. All this to support the ambition of a 60% CO₂-reduction in 2030 for the Wadden region. There are 10 projects, of which 5 have already started, such as the conversion of the Ecolution and hydrogen refueling at the quay in Den Helder.

H2Trac

Developing a Controlled Traffic Farming Tractor on Hydrogen

H2Trac's vision is that land is farmers' best friend, something that must be nurtured. That's why H2Trac's mission is to help farmers with innovative ways to keep the soil healthy and improve yields. H2Trac wants to do this with machines that run on clean hydrogen and enable controlled traffic farming. As a result, the same tramlines are always used and the soil for the plants remains loose and vivid. With input of 7 farmers a new model, the EOX - 175 is build and is ready for testing; the hydrogen version is planned for 2022.

6 H₂ Filling Stations by Greenpoint Fuels

To Develop and Construct 6 Hydrogen Filling Stations in NL

Greenpoint Fuels currently has pending permit applications for 5 hydrogen filling stations. Creating a network of tapping points; the filling stations will be located in Zeewolde, Ede, Bleiswijk, Oude-Tonge, Haps and Sliedrecht. Three locations have already been licensed for hydrogen and 3 new locations will follow later this year. Talks with installation companies, governments and front runners are at an advanced stage.

68 Hydrogen Taxi's

Use of 68 Hydrogen Taxi's for Special Care (WMO) Transportation.

This is the first hydrogen taxi fleet in the Netherlands. Since 2019 35 Toyota Mirai's are driving in The Hague and 10 in Ede. In 2020 23 more hydrogen cars where added. *"The client requires us to be available 24/7 with our fleet. Due to the large range of the hydrogen car and the fast refueling, Noot Personenvervoer can offer this."*

Deployment: Built Environment

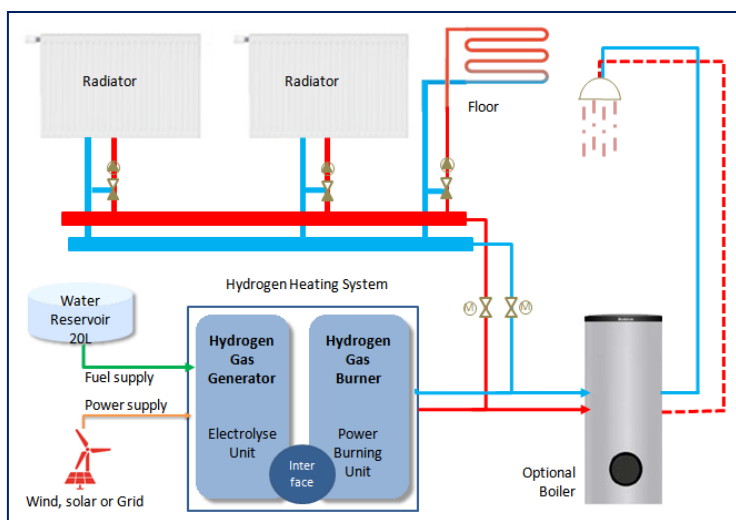

<h3>Overview</h3>	<h3>Autonomous Hydrogen Heating System</h3> <p>Off Grid on Demand Hydrogen Production and Use in Homes</p> <p>The unique H₂ systems are connected to low voltage electricity for electrolysis as a way of production. The systems produce 100% emission CO₂ free hydrogen without any loss of efficiency. Ideally, the low voltage power needs to be provided by solar panels, wind or a generating electricity grid. An 'on-board' and 'on-demand' chilled water will be transformed into hydrogen and oxygen. These two elements combined are ideal for heating and generating energy in order to heat homes and tap water. The unique H₂O methodology creates maximum consumer independence from any supplier or utility company.</p> <p>Category: Deployment in built environment Capacity: 40 kW Process phase: system maturity, in 2022 on market Project period: 2019 - 2023 Project code: phase 1 H₂ - industry TSE Contact: www.120h.com</p>	<h3>Hydrogen Eeserwold</h3> <p>Development of a Business Park with a Hydrogen Energy Hub</p> <p>Hydrogen Eeserwold is being developed as a geographically central station north of Gronau. The nearby A52 and a central gas network provide the ideal infrastructure. The presence of the companies in the Eeserwold business park and the built environment provide opportunities. Research focus are possibilities to store and transport electricity from wind and sun from the surrounding area in gaseous form. A hydrogen filling station is planned at the water business park in 2021.</p> <p>Category: Deployment in built environment Capacity: 4 - 12000 development + filling station Process phase: Feasibility study Project period: 2020 - 2023 Project code: 8 to 45 Million Euro Contact: www.waterbusinesspark.nl</p>	<h3>Hydrogen District Wagenborgen</h3> <p>Connecting 40 Homes to the Local Hydrogen Network</p> <p>The hydrogen is used to heat the houses. The houses will receive a hybrid heat pump that can (or sustainably) generate electricity as much as possible. At said moments, a boiler working on hydrogen carbon can be used. The boiler will be installed and will receive solar panels and gas stored will be replaced by hydrogen tubes. The hydrogen that is needed is made by a burner in 'Stationen'. The gas is directly transported to the houses via existing gas pipes, and is fully use a new network to be built.</p> <p>Category: Deployment in built environment Capacity: 40 homes Process phase: execution Project period: 2021 - 2023 Project code: unknown Contact: ener@energypark.nl</p>	<h3>H2@Home</h3> <p>Research of in-house Installations with Hydrogen</p> <p>A consortium of companies, lead by Flanco and gplair, are doing research on in-house installations with hydrogen. They research a new reduce, generate and deliver of in-house piping systems for gas producing house connectivity. Slogan is also to find out which measurement technology systems are needed when using hydrogen instead of natural gas to heat residential houses and how to change their existing systems cover for natural gas.</p> <p>Category: knowledge, built environment Process phase: execution Project period: 2020 - 2023 Project code: 200k TSE subsidy Contact: Luisa.Moskat.gplair@flanco.nl Rien.Moore@flanco.nl Andreas.Klostermann@flanco.nl</p>
<h3>The Green Whale</h3> <p>Converting Existing Grid to a Local Produced Hydrogen Grid</p> <p>At the initiative of the Energy Coalition (Energy Club), 2200 homes conversion and 200 industrial for hydrogen will be converted from the natural gas and transfer them to hydrogen gas, produced on location. Our proposition is that converting a Dutch from natural gas to hydrogen gas will cost approximately 15,000 euros. This cost will be the same as the Groninger subsidie for Conversion CO₂, which subsidizes 23,000 euros and therefore with the club, but the costs remain considerably higher. In 2021 the feasibility study will be completed.</p> <p>Category: Deployment in built environment Capacity: 22 000 Process phase: Feasibility study Project period: 2020 - 2021 Project code: 2026 Contact: www.thegreenwhale.nl</p>	<h3>Innovahub</h3> <p>A Sustainable Power Station for the Built Environment in GO</p> <p>Innovahub meets the demand for electricity, heating and cooling from the residential district. The hub is supplied with energy generated by wind turbines and solar panels in the renewable surroundings. The innovation is the point for the storage and release of green hydrogen. Heat is released during the production of hydrogen in the Innovahub. This heat is stored, for future use during the cold seasons. The first installation will be located in 19,50 houses, construction will start this April. The project is completed in Q1 2022.</p> <p>Category: Deployment in built environment Capacity: 19,50 homes Process phase: execution Project period: 2021 - 2022 Project code: H2@Innovahub Contact: H2@Innovahub.nl</p>	<h3>HydroGEM</h3> <p>A Hydrogen Boiler without Incineration and Electricity for Homes</p> <p>The hydrogen boiler converts hydrogen gas into heat. A catalyst in the boiler creates a reaction between the recombined hydrogen and oxygen in the reactor chamber. The reaction activates an oxidation process without electricity or a flame. This reaction releases enough energy to heat an entire home. A system of heat exchangers provides hot tap water (DVG) for the central heating. The only by-product of the entire reaction is harmless water vapor. The future development is still ongoing, in collaboration with the University of Twente.</p> <p>Category: Deployment in built environment Capacity: 20 kW Process phase: execution Project period: 2021 - 2023 Project code: unknown Contact: H2@hydrogem.nl</p>	<h3>H2H.nu</h3> <p>Application of Hydrogen as an Energy Carrier in Wageningen</p> <p>Optimal use of Hydrogen gas as a replacement for natural gas in local housing schemes (renting) and industry (storage generation), by generating hydrogen at the location with an innovative electrolyser storage and using local solar farms for energy in 2021 concrete plans are made and collaborations with other initiatives, as in the city of Ede, is researched.</p> <p>Category: Deployment in built environment Capacity: residential area level Process phase: Feasibility study Project period: 2021 Project code: unknown Contact: H2@h2h.nl</p>	<h3>Retrofit Hydrogen Condensed Boiler</h3> <p>Towards the Introduction of H₂ in the Built Environment</p> <p>The new developed boiler is a retrofit of an existing domestic natural boiler in which several components, such as the burner and flame generating system are replaced. The boiler will be tested in a built house in 2020/2021.</p> <p>Category: Deployment in built environment Capacity: 30 kW Process phase: Feasibility study / POC Project period: 2020 - 2021 Project code: unknown Contact: Seider.Gertjan@dnv.com</p>
<h3>Power-To-Gas (P2G) Phase II</h3> <p>Power to Hydrogen for Residential Heating of Apartments in Rozenburg</p> <p>Decentralised integration of wind and solar energy via hydrogen from electrolysis for the heat supply of the built environment. The hydrogen is delivered by the regular natural gas pipelines to the boiler house of the apartment complex where the first hydrogen boiler gas tested.</p> <p>Category: Deployment in built environment Capacity: 3 residential houses Process phase: execution Project period: 2018 - 2020 Project code: unknown Contact: alfred.lindendorfer@stedin.nl</p>	<h3>Hydrogen Church</h3> <p>Heating the Monumental Eusebius Church with Hydrogen</p> <p>Using hydrogen from a sustainable source to heat a monumental church is new and offers an opportunity to reduce the carbon gas contribution of monuments. The possibilities and value will in a feasibility study and will receive a step-by-step permit is received, starting with heaters on 60% green hydrogen. You can then continue to give in heat all buildings up to 100% green hydrogen.</p> <p>Category: Deployment in built environment Capacity: several heaters Process phase: POC Project period: 2018 - 2023 Project code: unknown Contact: Dirk.Ockels@HyMatteurs.com</p>	<h3>Hydrogen Neighbourhood Hoogeveen</h3> <p>100 Newly Built Houses and 430 Existing Houses Connected to Hydrogen</p> <p>The newly built Allport-Doel residential area has been designated as a demonstrable project for the application of hydrogen in residential houses. The distribution plan will take into account the installation. Construction is expected to start in 2021. WaterstofLab

HydrogenLab for the Built Environment

The HydrogenLab brings together relevant parties and knowledge to conduct an open dialogue about the following question: "How do we ensure clarity about the role of hydrogen in the energy mix for the built environment?" The common challenge is to make the built environment CO₂ neutral, at the lowest possible social costs and the greatest possible added value. This requires choices that are made here and now. Anyone who can and wants to contribute to more nuance in the debate about hydrogen in the built environment, and is open to a constructive dialogue, is more than welcome to participate in this (online) hydrogen community.

Zero Emissie Transport Zeeland

The Use of Hydrogen in Transport

The project will encourage companies to introduce Zero Emission Transport into their own business cases. In one of the working packages the role for green hydrogen in heavy transport will be investigated. The feasibility is being investigated at sector level and company level. At sector level, feasibility focuses on the availability of alternative fuels, infrastructure and the effect on total CO₂ emissions. At a company level, feasibility focuses on the availability of equipment, applicability in logistics processes and business case.

HYDRA-2

Safe Flying with Liquid Hydrogen

With flight demonstrations using hydrogen-powered drones NLR takes a new and safe step towards climate neutral aviation contributing to the ambitions of the Sustainable Aviation Agreement and the Hybrid Electric Flight Action Program. In spring 2021, NLR will perform drone (HYDRA-2) test flights using compressed hydrogen as an energy carrier in a fully composite tank. Additionally, fuel cell technology will be demonstrated producing electric power for the propellers. In December 2021, NLR aims to perform a maiden test flight with a drone powered by liquid hydrogen stored in a metal tank. This will be followed by test flights in autumn 2022 with a fully composite liquid hydrogen tank on board.

Brightsite Hydrogen

Development of Plasma Technology on Chemolot for the CO₂-free Production of Hydrogen and Ethylene from Methane

Using electricity as an energy source, a plasma process is being developed for the CO₂-free production of hydrogen, acetylene, ethylene and related hydrocarbons from methane, that can be used in the production of plastics. The aim is to construct a demo plant in 2025 producing 10 t/d of hydrogen and a production plant in 2030 producing 0.2 Mt/yr hydrogen. The business case is potentially positive because it can save on future costs of CO₂ emissions and the use of naphtha for ethylene production.

Groene Waterstof Booster

Developing the hydrogen value chain in the Northern Netherlands and beyond ..

Connecting parties and initiatives, accelerating innovation in the hydrogen chain and making it more sustainable through green hydrogen, and achieving sustainable growth and employment. Create an open innovation climate and promote hydrogen to enable the region to develop into an innovation ecosystem for the transition to green hydrogen. Provide an environment of knowledge and technology for (vocational) education. We provide a testing, demonstration and learning environment in the field of hydrogen.

Category:	knowledge
Capacity:	scalable
Process phase:	execution
Project period:	2020 -
Project costs:	1.2 M subsidy

Hydrogen Coalition

For a Sustainable Hydrogen Economy in 2030 in the Netherlands, 39 Organisations Urge NL to Scale Up Investments.

With the recent increase of the European CO2 reduction target to 55%, hydrogen is becoming even more important as a sustainable alternative to fossil resources and fuels and as a buffer for the electricity grid. The next Lower House of Parliament faces the challenge of further future-proofing Dutch climate and energy policy. The starting point here is accelerated upscaling of the hydrogen chain, with the most sustainable possible final scenario.

Category:	knowledge, networking
Capacity:	39 organisations
Process phase:	execution
Project period:	2018 - 2021
Project costs:	2 M

H2GO

Towards Hydrogen Energy Island Goeree Overflakkee

H2GO is working on scalable sub-projects concerning production, distribution and demand for green hydrogen in various domains of society. The program has four main objectives: contributing to a reliable energy supply with hydrogen; replacing fossil fuels with hydrogen; reusing the existing natural gas infrastructure for hydrogen; and sharing our expertise and experiences so that it can be duplicated. H2GO applies a divided risk-aid strategy. This gives us room to adapt the strategy as we go, if required.

Category:	knowledge, network
Capacity:	8 projects
Process phase:	concept to execution
Project period:	2017 - 2030
Contact:	www.h2goe.nl

Partners: various logos including TNO, Rijkswaterstaat, etc.

Alkaliboost

Developing Better Alkaline Electrolyser Stacks

The power of alkaline technology is that the electrochemical stacks are relatively cheap, because no expensive or noble metals are used. The committed parties are developing and testing new alkaline stack designs that make it possible to operate at a much higher current density.

Category:	production, knowledge
Capacity:	scalable
Process phase:	concept
Project period:	2018 - 2023
Project costs:	TSE 500 k
Contact:	Gerhard Reijnen, Nouryon

Partners: Nouryon, TU/e

HYDROGREENN

HYDROgen Regional Energy Economy Network Northern NL

Promoting business development of hydrogen applications and sharing hydrogen developments and information in or from the northern Netherlands. The hydrogen applications are used to contribute to the green innovation of energy management, mobility, industry and chemistry, with special attention for the development of education. There are now 450+ members involved.

Category:	knowledge, networking
Capacity:	-
Process phase:	execution
Project period:	2019 - 2023
Project costs:	-
Contact:	info@hydrogreenn.nl

Partners: GDSU/ITE, DNV-GL, TNO, kiwa, New Energy

HyDelta

Research on Obstacles on Hydrogen Deployment

HyDelta is a national cooperation program that removes barriers that delay or halt hydrogen projects. The project that are stranded struggle for example with gaining permits, infrastructural challenges and a lack of clarity about safety regulations.

Category:	knowledge, research
Capacity:	20 man years research capacity
Process phase:	execution
Project period:	start 2020 - april 2021
Project costs:	2 M
Contact:	c.japena@newenergycoalition.org

Partners: GDSU/ITE, DNV-GL, TNO, kiwa, New Energy

Hydrogen House Apeldoorn

Demonstration and Learning Model House for Training Employees

The aim is to initially train approximately fifteen technicians and teach them how to use hydrogen and water networks. They will soon have to be able to apply this in practice, first of all in project Lochem. The house is also intended for the installer of Remeha hydrogen boilers.

Category:	knowledge
Capacity:	1 house
Process phase:	execution
Project period:	2020 - 2021
Project costs:	260 k
Contact:	info@h2allender.com

Partners: autlander, kiwa, remeha

SWITCH

Experimenting with Small-scale Generation of Hydrogen on Farms

TNO and WJLF are starting a hydrogen pilot project in the Pieldeft in Lelystad. Here experiments are being conducted with small-scale generation of hydrogen on farms, using solar and wind energy produced at the same location. In summer 2021 the experiments will start.

Category:	knowledge
Capacity:	small-scale
Process phase:	execution

Project costs:	1 M
Contact:	pieter.aecon@tno.nl

Partners: ACRRES, TNO

WaterstofLab

HydrogenLab for the Built Environment

The HydrogenLab brings together relevant parties and knowledge to conduct an open dialogue about the following question: “How do we create clarity about the role of hydrogen in the energy mix for the built environment?” The common challenge is to make the built environment CO₂ neutral, at the lowest possible social costs and the greatest possible added value. This requires choices that are made here and now. Anyone who can and wants to contribute to more nuance in the debate about hydrogen in the built environment, and is open to a constructive dialogue, is more than welcome to participate in this (online) hydrogen community.

Category:	knowledge, societal acceptance
Capacity:	70+ members
Process phase:	open for contribution
Project period:	2020 - 2021

Zero Emissie Transport Zeeland

The Use of Hydrogen in Transport

This project will encourage companies to introduce Zero Emission Transport into their own business cases. In one of the working packages the role for green hydrogen in heavy transport will be investigated. The feasibility is being investigated at sector level and company level. At sector level, feasibility focuses on the availability of alternative fuels, infrastructure and the effect on total CO₂ emissions. At a company level, feasibility focuses on the availability of equipment, applicability in logistics processes and business case.

HYDRA-2

Safe Flying with Liquid Hydrogen

With flight demonstrations using hydrogen powered drone's NLR takes a new and safe step towards climate-neutral aviation contributing to the ambitions of the Sustainable Aviation Agreement and the Hybrid Electric Flying Action Program. In spring 2021, NLR will perform drone (HYDRA-2) test flights using compressed hydrogen as an energy carrier in a fully composite tank. Additionally, fuel cell technology will be demonstrated producing electric power for the propellers. In December 2021, NLR aims to perform a maiden test flight with a drone powered by liquid hydrogen stored in a metal tank. This will be followed by test flights in autumn 2022 with a fully composite liquid hydrogen tank on board.

Dedicated to innovation in aerospace

Production, Transport, Storage and Use of Hydrogen in the Wadden Sea

The Wadden islands of Ameland and Borkum focus on hydrogen as a role model for a sustainable Island municipality. H2Watt offers a platform for the realization of various innovation projects for the implementation of hydrogen. Central are methods and systems for the use of hydrogen about production, storage, mobility and heating systems. The first projects include a residential area, the Borkumer Inselbahn and a water taxi.

Brightsite Hydrogen

Development of Plasma Technology on Chemolot for the CO₂-free Production of Hydrogen and Ethylene from Methane

Using electricity as an energy source, a plasma process is being developed for the CO₂-free production of hydrogen, acetylene, ethylene and related hydrocarbons from methane, that can be used in the production of plastics. The aim is to construct a demo plant in 2025 producing 10 kt / yr hydrogen and a production plant in 2030 producing 0.2 Mt / yr hydrogen. The business case is potentially positive because it can save on future costs of CO₂ emissions and the use of naphtha for ethylene production.
